A gigantic comet, outclassing seen in modern times including Halley's is speeding through the so'ar system towards the sun at an approximate rate of 1,134,246 miles a day. The comet will be a thing of glory in the north western sky this spring and will probably remain visible for three

### Cow Swims To Island.

It is reported that almost every day an unusual scene may be witnessed on Loch Duich. Rosshire, New Brunswich, where a number of cows swim over to an island in the loch, about 200 yards from the mainland, feed there and return in the evening. They are never driven, but take their bath entirely of their own free will. If the wind is against them on their return journey, and the sea is rough, it sometimes is necessary for a man to put cut in a boat and help them over in turn by holding out his hand under each eow's chin, since they become dazed if the sea dashes in their faces, and swim in circles instead of going straight ahead.

## Girls Entertainment a Success.

One of the most enjoyable at tractions of the year was the entertainment given by the girls of the High School last Friday evening at the School Auditorium The program which was original, was unique and delightfully pleas ing in every particular. The cast of fifty showed marked talent and management of Mrs. Glenn Hook was a splendid example of what our own boys and girls, who never fail in anything they undertake, can do.

The first part of the program, Seventeen Miles To The Evolution of the American Woman, was one of the most beautifully arranged program features of its kind ever given on the local platform. 'Excellent" is the only word which even begins to describe it.
